After EGRP® System Installed

Grosse Pointe Park, MI - USA

Testimonial

"I was looking to solve water issues and manage storm water runoff and I'm very pleased. I would recommend the PARJANA EGRP® system to anyone with standing water issues"

-Home Owner

Project Description

2011, a residential yard in Grosse Pointe Park was flooded constantly with rain. This backyard is the lowest point in the surrounding area. The ground would remain saturated after rainfall, and not completely dry for weeks.

The homeowner had to pump out rainfall from the backyard several times each year, for 11 years.

August 2011, the EGRP® system was installed with very little disruption.

Results

Since September 2011, no water has accumulated after rainfall, even after substantial rain events.
